

EVAN GUENNOU

DATA ANALYST

A Data & AI engineer, I want to put my technical expertise to work for innovation. Passionate about analysing data and making it useful to business teams, I am looking for challenging assignments from September 2026.

PROFESSIONAL EXPERIENCE

THALES, Data & Generative AI Engineering

02/2026 to 08/2026

Operations Integration & Delivery · Gennevilliers (92), France

AI Pricing Assistant for the bid teams

- Full-stack and AI development: built a search interface and a RAG chatbot to query the price database.
- Extracted and restructured a 20-year history of quotation and bid data into an auditable database, using a private LLM.

Technical environment: Python, JS, Angular, SQL, Google Cloud Platform, AWS, private cloud, Docker, Kubeflow, Gitlab, Artifactory.

AI project management: customer incident handling agent

- Defined the use cases, organised the data and coordinated the development team.
- Deployed an AI agent (internal LLM) able to create tickets from external projects, then automate their response or their redirection.

Technical environment: Internal LLM API, Python, Angular, SQL, VM, Docker.

CANAL+, Data Analysis & BI

04/2025 to 08/2025

Finance & Performance department · Issy-les-Moulineaux (92), France

- **Data Analysis & BI:** leveraged the databases to support the Marketing teams in campaign targeting and decision-making.
- **Usage analysis:** studied the consumption habits of customers with no commitment to identify retention levers and guide the commercial offers.
- Created, automated and maintained dashboards for the regular monitoring of business KPIs and the identification of optimisation levers.

Technical environment: SQL, Python, NoSQL | Dataiku, Snowflake | Power BI, Excel.

EDUCATION

ESILV, Master of Engineering, Major in Data and AI

09/2021 to 06/2026

La Défense (92), France

Generative AI & LLM · Machine Learning · Deep Learning · Databases & Interoperability · Big Data · Computer Vision · Engineering Ethics · BI Pipeline · Soft skills & Leadership · StartUp track

RTU, university exchange, general engineering programme

09/2023 to 01/2024

Riga, Latvia

Le Likès, French Baccalauréat, Mathematics and Physics-Chemistry

09/2018 to 06/2021

Quimper (29), France

PROJECTS

Syntho Crowd

2026

Application based on customisable AI agents that evaluate and interact with the UX interface of websites. (Gemini Pro API, CrewAI, Playwright, FastAPI)

IBM Hackathon: chatbot for the Pôle Universitaire Léonard De Vinci

2025

AI chatbot built for PULV students and administration as part of an IBM hackathon. (IBM watsonx.ai, LangChain, ChromaDB, Docker)

Predictive tool for the reintroduction of endangered species

2025

Digital interface using a model that predicts new habitats for living species facing extinction. (Scikit-Learn, GeoPandas, Plotly)

Sign'ia

2024

Mobile application based on a Deep Learning model that translates French sign language into text. (PyTorch, OpenCV, MediaPipe, CNN/LSTM, Dart)
